                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    clones. 830 cDNA molecules encoding a human protein have been isolated and nucleotide sequences of 5'+ and 3'-ends of the cDNA molecules have been determined. Primers for synthesising the full length cDNA are useful for clarifying the function of the protein encoded by the cDNA. The full length clones were obtained by construction of full length enriched cDNA libraries that were synthesised by the oligo-capping method. The primers enable the production of the full length cDNA easily without any special methods. The present sequence is a human cDNA provided in the specification. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in CD-ROM format directly
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          No.:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence 1676
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       830 Primers useful for synthesizing full length cDNA clones and their use
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              genetic

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Alignment
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     cc leukaemias, both in general and in particular those involving the comegakaryocytic lineage. The SH3DIA gene maps to the small candidate cregion for low platelets on chromosome 21. Sequencing of 5 different cc sizes of cDNA clone from foetal brain (see AAZ34570-74) suggests that at cleast 3 isoforms exist. The invention provides methods for the diagnosis cand treatment of megakaryocytic abnormality, myeloproliferative disorder, acute leukaemia, neural disorders, thromobocycopenia, cc platelet disorder on chromosome 21, low platelets in deletion for 21, cassociation of gains in chromosome 21 with leukaemias, neural cassociation of gains in chromosome 21 with leukaemias, neural cassociation of gains in chromosome 21 with leukaemias, neural cassociation of gains in chromosome can corresponding cognitive dysfunctions, microephaly, lissencephaly, cand colpocephaly. Methods are also provided for: suppressing cells unable to regulate themselves; screening for a somatic alteration in the SH3DIA gene; monitoring the progress and adequacy of a treatment; monitoring ctumour risk progress or megakaryocytic abnormality, myeloproliferative disorder, haematopoietic disorder, platelet disorder or leukaemia; and creatment of a subject (including a prenatal subject) having megakaryocytic abnormality, myeloproliferative disorder, platelet cdisorder, platelet caid that cc expresses SH3DIA or its antisense nucleic acid

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         В
                                                                                                                                                                                      Percent Similarity:
                                                                                                                                                                                                                                                                                   The invention relates to primers for synthesising full length cDNA clones. 830 cDNA molecules encoding a human protein have been isolated and nucleotide sequences of 5'- and 3'-ends of the cDNA molecules have been determined. Primers for synthesising the full length cDNA are useful for clarifying the function of the protein encoded by the cDNA. The full length clones were obtained by construction of full length enriched cDNA libraries that were synthesised by the oligo-capping method. The primers enable the production of the full length cDNA easily without any special methods. The present sequence is a full length human cDNA of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in CD-ROM format directly
                                                                                                                                                                                                                                                  Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                        Claim 8;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            망
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Ishii c
                  sequence and an oligonucleotide comprising a sequence complementary to a polynucleotide which comprises a 3'-end sequence, where the oligonucleotide comprises at least 15 nucleotides and the combination of the 5'-end sequence'3'-end sequence is selected from those defined in the specification. The primer sets can be used in antisense therapy and in gene therapy. The primers are useful for synthesising polynucleotides, particularly full-length cDNAs. The primers are also useful for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs. The primers allow obtaining of the full-length cDNAs easily without any specialised methods. AAH03166 to AAH13638 and AAH13633 to AAH18742 represent human cDNA sequences; AAB92446 to AAB95893 represent human amino acid sequences; and AAH13632 to AAH13332 represent cligonucleotides, all of which are used in the exemplification of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    11-JAN-2000; 2000JP-00118776

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     mutants); (I)-specific antibodies (Ab); sequences antisense to the (I) polynucleotide; agents that downregulate expression of Ese genes or antagonists of an Ese binding partner are used to treat diseases associated with undesirable endocytosis and resulting changes in cellular function. Particularly overexpression of Esel is used to block clathrin-mediated endocytosis in vivo or in cell cultures, while administration of (I) is used to promote endocytosis of selected cells. (Ant) agonists of (I) or Ab are used to suppress abnormal proliferation of cells that can be stimulated to proliferate by a growth factor receptor; and similar
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   compounds (also inactive Ese mutants) can be used to prevent viral infection. Endocytosis may also be regulated, in vivo or in cell cultures, by forming an Ese-Espl5 complex, then binding dynamin to complex. Generally conditions that can be treated include cancer; abnormal cell division or migration; viral infection; or abnormal receptor signalling, tissue development or synaptic transmission
                                                                                                                                                      EH-domain and SH3-domain regulator of endocytosis;

Endocytosis may also be regulated, in vivo or in cell cultures, by forming an Ese-Esp15 complex, then binding dynamin to the complex. Generally conditions that can be treated include cancer; abnormal cell division or migration, viral infection; or abnormal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   with Esp15 protein), vesicular trafficking and actin cytoskeleton. Generally (I) (or its (ant)agonists, mimetics, fragments and inactive mutants); (I)-specific antibodies (Ab), sequences antisense to the (I) polynucleotide; agents that downregulate expression of Ese genes or antagonists of an Ese binding partner are used to treat diseases associated with undesirable endocytosis and resulting changes in cellular function. Particularly overexpression of Esel is used to block clathrin-mediated endocytosis in vivo or in cell cultures, while administration of (I) is used to promote endocytosis of selected cells. (Ant) agonists of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present sequence encodes mouse Esel. The present invention specifically describes mammalian Esel and 2 proteins (I) and their splice variants (Ese = EH-domain and SH2-domain regulator of endocytosis). (I) are involved in regulation of clathrin-mediated endocytosis (as a complex are involved in regulation of clathrin-mediated endocytosis (as a complex are involved in regulation of clathrin-mediated endocytosis (as a complex are involved in regulation of clathrin-mediated endocytosis (as a complex are involved in regulation of clathrin-mediated endocytosis (as a complex are involved in regulation of clathrin-mediated endocytosis (as a complex are involved in regulation of clathrin-mediated endocytosis).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence 5082
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    receptor signalling, tissue development or synaptic transmission
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               endocytosis, used e.g. for treating cancer or preventing viral infection

CC The present invention specifically describes mammalian Esel and 2
CC proteins (I) and their splice variants (Ese = EH-domain and SH3-domain
CC regulator of endocytosis). (I) are involved in regulation of clathrin-
CC mediated endocytosis (as a complex with Espl5 protein), vesicular
CC trafficking and actin cytoskeleton. Generally (I) (or its (ant)agonists,
CC mimetics, fragments and inactive mutants); (I)-specific antibodies (Ab);
CC sequences antisense to the (I) polynucleotide; agents that downregulate
CC to treat diseases associated with undesirable endocytosis and resulting
CC changes in cellular function. Particularly overexpression of Esel is used
CC to block clathrin-mediated endocytosis in vivo or in cell cultures, while
CC (Ant)agonists of (I) is used to promote endocytosis of selected cells.
CC (Ant)agonists of (I) or Ab are used to suppress abnormal proliferation of
CC cells that can be stimulated to proliferate by a growth factor receptor;
CC and similar compounds (also inactive Ese mutants) can be used to prevent
CC viral infection. Endocytosis may also be regulated, in vivo or in cell
CC cultures, by forming an Ese-Espl5 complex, then binding dynamin to the
CC complex. Generally conditions that can be treated include cancer;
CC abnormal cell division or migration; viral infection; or abnormal
CC receptor signalling, tissue development or synaptic transmission. The
CC present sequence represents mouse Esel.
                                                                                                                                                                                   US-09-720-934-2_COPY_215_310 (1-96)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          멂
                         region for low platelets on chromosome 21. Sequencing of 5 different sizes of cDNA clone from foetal brain (see AAZ34570-74) suggests that at least 3 isoforms exist. The invention provides methods for the diagnosis and treatment of megakaryocytic abnormality, myeloproliferative disorder, platelet disorder, acute leukaemia, neural disorder, thromobocytopenia, platelet disorder on chromosome 21, low platelets in deletion for 21, association of gains in chromosome 21 with leukaemias, neural abnormalities, dysfunctions and disorders including brain malformations
                                                                                                                                                                                                                                                                          This is the nucleotide sequence of full-length cDNA (clone 11) contributes to the development of platelets and the pathogenesis of leukaemias, both in general and in particular those involving the megakaryocytic lineage. The SH3DIA gene maps to the small candidate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Nucleic acid from the human SH3D1A gene and its products, useful for the diagnosis and treatment of myeloproliferative disorders and leukemia.

                                                                                                                                                                                                                                                                        CC This is the nucleotide sequence of full-length cDNA (clone 21)
CC corresponding to a novel human SH3 gene, termed the SH3D1A gene, that
CC contributes to the development of platelets and the pathogenesis of
CC leukaemias, both in general and in particular those involving the
CC megakaryocytic lineage. The SH3D1A gene maps to the small candidate
CC megakaryocytic lineage. The SH3D1A gene maps to the small candidate
CC sizes of cDNA clone from foetal brain (see AAZ34570-74) suggests that at
CC least 3 isoforms exist. The invention provides methods for the diagnosis
CC and treatment of megakaryocytic abnormality, myeloproliferative disorder,
CC platelet disorder, acute leukaemia, neural disorders, thromobocytopenia,
CC platelet disorder on chromosome 21 with leukaemias, neural
CC association of gains in chromosome 21 with leukaemias, neural
CC and corresponding cognitive dysfunctions, microcephaly, lissencephaly,
CC and colpocephaly. Methods are also provided for: suppressing cells unable
CC and corresponding cognitive dysfunctions, microcephaly, lissencephaly,
CC and colpocephaly. Methods are also provided for: suppressing cells unable
CC to regulate themselves; screening for a somatic alteration in the SH3D1A
CC gene, monitoring the progress or megakaryocytic abnormality, myeloproliferative
CC disorder, haematopoietic disorder, platelet disorder or leukaemia; and
CC treatment of a subject (including a prenatal subject) having
CC merakerocytic abnormality, myeloproliferative
                                                                                                                                                                                     Sequence 5458 BP;
                                                                                                                                                                                                                        megakaryocytic abnormality, myeloproliferative disorder, disorder, leukaemia or neural disorder using a nucleic acexpresses SH3D1A or its antisense nucleic acid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Nucleic acid from the human SH3D1A gene and its products, useful for the diagnosis and treatment of myeloproliferative disorders and leukemia.

The present invention specifically describes mammalian Esel and 2 proteins (I) and their splice variants (Ese = EH-domain and SH3-domain CC proteins (I) and their splice variants (Ese = EH-domain and SH3-domain CC regulator of endocytosis). (I) are involved in regulation of clathrin-cCC mediated endocytosis (as a complex with Esp15 protein), vesicular CC mimetics, fragments and inactive mutants); (I) (or its (ant)agonists, CC sequences antisense to the (I) polynucleotide; agents that downregulate CC expression of Ese genes or antagonists of an Ese binding partner are used CC to treat diseases associated with undesirable endocytosis and resulting CC changes in cellular function. Harticularly overexpression of Esel is used CC administration of (I) is used to promote endocytosis of selected cells. (Ant)agonists of (I) or ab are used to suppress abnormal proliferation of CC cells that can be stimulated to proliferate by a growth factor receptor; and similar compounds (also inactive Ese mutants) can be used to prevent viral infection. Endocytosis may also be regulated, in vivo or in cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New nucleic acid encoding Esel and 2 endocytosis, used e.g. for treating
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Mouse; murine; Esel; Ese2; endocytosis; vesicular trafficking; regulation; actin cytoskeleton; detection; cancer; infection; EH-domain and SH3-domain regulator of endocytosis; anticancer; antiproliferative; antiviral; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Mouse EselL

The polynucleotides and polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, haematopoiesis regulating activity, tissue growth factor activity, immunomodulatory activity and activity inhibit activity and may be useful in the diagnosis and/or restment for activity and may be useful in the diagnosis and/or restment for activity had may be useful in the diagnosis and/or restment for activity had may be useful in the diagnosis and/or restment for activity and may be useful in the diagnosis and/or restment for activity and may be useful in the diagnosis and/or restment for activity and may be useful in the diagnosis and/or restment for activity and may be useful in the diagnosis and/or restment for activity and may be useful in the diagnosis and/or restment for activity and restment for activity and may be useful in the diagnosis and/or restment for activity and setting the diagnosis and/or restment for activity and setting the diagnosis and/or restment for activity and setting the diagnosis and/or restment for activity activity and setting the diagnosis and/or restment for activity activity and setting the diagnosis and/or restment for activity activity and setting the diagnosis and or restment for activity activity and setting the diagnosis and or restment for activity activity and setting the diagnosis and or restment for activity activity and setting the diagnosis and or restment for activity activity activity activity activity activity and setting the diagnosis activity activity activity activity activity and setting the diagnosis activity act
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        treatment of cancer, leukaemia, nervous system disorders, arthritis inflammation. Note: The sequence data for this patent did not form I of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

XX New isolated nucleic acid encoding a protein for diagnosing, preventing, proteining or ameliorating medical conditions and used as food additives or treating or ameliorating medical conditions and used as food additives or processoratives.

XX Claim 1; SEQ ID NO 88; 837pp; English.

XX The invention describes an isolated nucleic acid molecule (I) encoding a convel central nervous system protein. (I) and polypeptides (III) encoded CC by (I), are used to treat a medical conditions and in diagnosis of a pathological condition. Disorders which are diagnosed or treated include convel central nervous system protein are diagnosed or treated include by (I), are used to treat a medical conditions and in diagnosis of a pathological condition. Disorders which are diagnosed or treated include convel central sclerosis, infections are diagnosed or treated include convel central sclerosis, infections caused by bacteria, viruses c.g. cardiac arrest, cerebrovascular disorders e.g. Alzhaimer's disease and convel trophic lateral sclerosis, infections caused by bacteria, viruses c.g. anglogenesis, nervous system disorders e.g. Alzhaimer's disease and convel trophic lateral sclerosis, infections caused by bacteria, viruses c.g. corneal infection, gastrointestinal disorders e.g. dysphagia, cc e.g. corneal infection, gastrointestinal disorders e.g. dysphagia, cc e.g. corneal infection, gastrointestinal disorders e.g. diabetes can disorders e.g. testicular feminisation, endocrine disorders e.g. diabetes can pituitary dwarfism, cancers and disorders at the cellular level e.g. cc espiratory disorders e.g. nonallergic rhinitis, renal disorders e.g. calcute kidney failure and blood related disorders e.g. myocardial contents before transplantation, for supporting cell culture of primary tissues, to regenerate tissues and in chemotaxis. The content protein, to increase or decrease storage capabilities, fat content, lipid, protein,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             e.g. breast and ovarian cancer and other cancers of the adrenal gland, bone, bone marrow, breast, gastrointestinal tract, liver, lung, or urogenital; (b) immune disorders e.g. Addison's disease, allergies, autoimmune haemolytic anaemia, hutoimmune thyroiditis, diabetes mellitus, crohn's disease, multiple sclerosis, rheumatoid arthritis and ulcerative colitis; (c) cardiovascular disprders such as myocardial ischaemias; (d) wound healing; (e) neurological diseases e.g. cerebral anoxia and epilepsy; and (f) infectious diseases such as viral, bacterial, fungal and parasitic infections. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Claim 1; SEQ ID NO 33; 664pp +
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New isolated nucleic acids and polypeptides, useful for diagnosing treating and/or preventing human diseases and disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            or ameliorating medical conditions e.g. by protein or gene therapy. The genes were isolated from a range of human tissues disclosed in the specification. The nucleic acids, proteins, antibodies and (ant) agonists are useful in the diagnosis, treatment and prevention of: (a) cancer,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence 3466 BP; 1056 A; 829

                                                                                                    Query Match:
                                                                                                                                                                                                                                                                                      CC genes. (I) is useful in gene therapy techniques to restore normal cuseful for generating antibodies against it, detecting or quantitating a college of the sequences, as molecular weight markers and as a food college of sites expressing (II). (I) and (II) are useful in medical imaging converting and polynucleotide sequences have applications in college of sites expressing (II). (I) and (II) are useful for treating disorders convolving aberrant protein expression or biological activity. The college of sites expression, and the sequences have applications in college of darances, forensics, gene mapping, identification of mutations college of data and products dependent on DNA and and to produce other types of data and products dependent on DNA and canding sequences. AAS64197-AAS94564 represent novel human diagnostic coding sequences of the invention. Note: The sequence data for this collection of the printed specification, but was obtained in collection in format directly from WIPO at the collection of the printed specification, but was obtained in collections and intentions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                sequences. (I) is useful as hybridisation proces, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mappi and in recombinant production of (II). The polynucleotides are also in diagnostics as expressed sequence tags for identifying expressed in diagnostics as expressed sequence tags for identifying expressed in diagnostics.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits and to assess
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       31-MAR-2000; 2000US-00540217.
